## Summary

A proactive Tester with 2+ yrs of testing experience. ISTQB certified.

- Provided testing expertise in all stages of software development.
- Created test plan, test strategy, test cases and test scripts.
- Hands-on experience with Web-based apps, API, Java, Playwright, Git, JIRA & its Addons
- Team player, focused on the efficient collaboration between the product and the development teams.

## Education

**University of Kent, Canterbury - Computer Science BSc Lower Second-Class Honors (2:2)**

### Group project (Dissertation)

F.R.A.M.E – Facial Recognition Attendance Monitoring Engine

For my group project we created a facial recognition software app that identifies a student's face and matches it to their student ID. If there is a match, the student is logged as attended. We did this using Python and face recognition Python library. In the project I found working as a team and achieving our goals set within the scope of the project particularly rewarding.

### Secondary Education

College & GCSE Study – Chelmsford college (Chelmsford, Essex) **Btec Level 3 IT:** 3 Distinctions (DDD).

**GCSEs:** 8 GCSEs including C in Maths and English.

## Work History

August 2021-June 2024

**Hotovo - Automation / Manual Software Tester(QA)**

I am currently working with Hotovo as a Software tester on project "Akixi". This includes day to day problem solving and needing a good eye for detail. Spotting patterns and bugs figuring out how bugs could affect other parts of the software. This position has also enhanced my ability to work well in a team & independently. During my time in the project I worked on Test case design, test execution, test reviews and writing test scripts. I also mentored and onboarded new testers and led the team when the Test lead was absent. This gave me great insight into leadership roles.

## Skills

### Programming:

- **Playwright** - I have experience using playwright with Java for writing automation test scripts
- **HTML** – I have experience with coding websites using HTML.
- **CSS** – I used CSS in collaboration. with HTML to design the websites
- **JavaScript** – This was used with HTML and CSS in a website setting
- **Java** – I use Java to write automation test scripts
- **Python** - I used Python for my final year project (F.R.A.M.E) and my creative project (GIF Generator).

### Software:

- **Microsoft Office** – I frequently use PowerPoint and Word and I have experience in Excel and Teams.
- **JIRA/Confluence** - Used to organise work on projects assigning tickets and bugs.
- **IntelliJ** – I use this IDE for Java
- **VS Code** – I use this IDE for HTML/CSS/JavaScript.
